

## Gain traction with your general surgical table.

Cmax / 3085 SP / 3080  
Orthopedic Extension

As an alternative to a dedicated orthopedic fracture table such as the Amsco® OrthoVision® Orthopedic Table, STERIS Corporation offers the Orthopedic Extension. This table accessory serves as an ideal solution when current case load may not warrant a dedicated table, when budget restraints are a concern, when considering a supplemental or secondary fracture table, or when the preference is to minimize the shuffle of tables.

### Maximize Your Investment in Your General Surgical Tables:

The Orthopedic Extension fits the following STERIS surgical tables: Cmax™ Surgical Tables, Amsco® 3085 SP Surgical Tables and Amsco® 3080 Surgical Tables. This mobile accessory can be used throughout your facility to increase the variety of surgical procedures you offer including supine or lateral lower extremity orthopedic procedures requiring skeletal or boot traction (e.g., hip pinning, intramedullary (IM) nailing or tibia/fibula surgery).

### Unobstructed C-arm capability:

The radiolucent carbon fiber abductor bars give you unobstructed imaging capabilities and versatile positioning of the the patient's lower extremities according to his/her size and treatment requirements. Each abductor bar has two metal joints that rotate and can be locked in 7.5 degree increments from 0 to 180 degrees.

### Ergonomic Attachment and Storage:

The mobile stainless steel accessory cart (above, right) provides ample storage space for your orthopedic accessories and also functions as a convenient platform for docking, undocking and storing the abductor bars. No heavy lifting required.

### Flexible Positioning:

The Tenzor™ Carbon Fiber Traction Unit provides precise, smooth adjustment to the amount of traction being pulled. The gauge on the top surface of the tensiometer gives a visual indication of the tension being applied (up to 60 foot-pounds of torque). The quick-connect style makes it easy to attach a traction boot, a traction bow-block or a skeletal traction block, so you can apply traction in a number of different ways.

### Patient Safety:

Patients weighing up to 400 lb. (181 kg) can be postured using the Orthopedic Extension. STERIS offers additional accessories such as larger obese traction boots and the T-shaped sacral rest, which offers greater width than the standard wedge-shaped sacral rest. For smaller patients, we offer a pediatric-sized sacral rest, perineal post and traction boots.

### Orthopedic Extension with standard accessory package (BF806)\*

- Abductor Bars (not shown)
- Accessory Cart (not shown)
- Wedge-shaped Sacral Rest with pad
- Perineal Post with pad
- Tenzor™ Carbon Fiber Traction Unit Assemblies (2)
