

# Flexible, Efficient and Safe Connectivity

## Harmony® CONNECTPOINT™ Video Connectivity

Today's operating rooms handle a wide variety of open and minimally invasive procedures. Mobile equipment such as endoscopic carts and C-arms offer flexibility, but they can pose positioning challenges in the clinical environment. Power and video cables can clutter the floor, present trip hazards, and require more cleaning time between cases. Positioning mobile equipment is also a challenge, particularly when the video equipment connections are limited to fixed wall locations that confine mobile equipment to one particular spot in the room. If that location isn't in the ideal clinical position for a surgeon, the clinical staff will be forced to make compromises.

### There's a versatile and safe solution!

The Harmony CONNECTPOINT Video Connectivity System offers **versatile** connectivity, optimizes equipment position and **flexibility** around the sterile field, reduces clutter, and improves **safety** and **efficiency** for your staff and patients.

Harmony CONNECTPOINT systems provide power and video signal connections from a flexible arm attached to any STERIS surgical lighting system. With **factory tested pre-wired arms**, the Harmony CONNECTPOINT system is designed for durability and reliability. The Harmony CONNECTPOINT solution can be added at any time, now or in the future, as your room needs evolve. This is the perfect solution to quickly integrate your room and increase surgeon visualization for a fraction of the cost of a complete room renovation.

Flexible, efficient and reliable video connectivity, the innovative STERIS Harmony CONNECTPOINT solution solves your toughest positioning challenges.

Compact service head brings connectivity closer, providing many features of a boom at a lower price.

## Traditional Room

Tripping hazards and awkward positioning in the room.

## Harmony CONNECTPOINT Room

Harmony CONNECTPOINT system eliminates trip hazards and allows for better ergonomic positioning for surgeons.

# Features and Benefits:

## Versatile connectivity

The Harmony CONNECTPOINT system works with any type of mobile equipment that requires video and data connectivity or power. It **supports all standard video signals** (DVI, HD-SDI, S-video and RGBHV), and the ceiling-mounted power receptacle eliminates the need for equipment to be positioned near the wall outlet. This flexibility allows signals to be seamlessly routed from the device to anywhere around the surgical field.

## Simple, flexible positioning

The simple, ceiling-mounted arm allows the Harmony CONNECTPOINT solution to cover a **wide 340 degree arc** around the sterile field. By utilizing a ceiling-mounted system, the staff can connect mobile equipment and position the equipment where the surgeon really needs it.

## Greater safety and efficiency

The Harmony CONNECTPOINT system **reduces total room turnover time** since all mobile equipment floor cables are eliminated. With fewer obstacles to work around, the cleaning crew can safely increase their efficiency and move on to the next room more quickly.

For more information, please call your STERIS account manager or visit [www.steris.com](http://www.steris.com).

### At a Glance Compatible with:

- C-arms
- Microscopes
- MIS carts
- Cameras
- Light sources
- Video processors
- Insufflators
- Gastrosopes
- Colonscopes
- Electrosurgical generators
- Monitors
- Medical grade printers
- ...and more!
